# Bank Management System

## Introduction:

I made a “Bank Management System” with the database connected at backend. And frontend was the website made for bank.

## Tools:

I used different tools in that project.

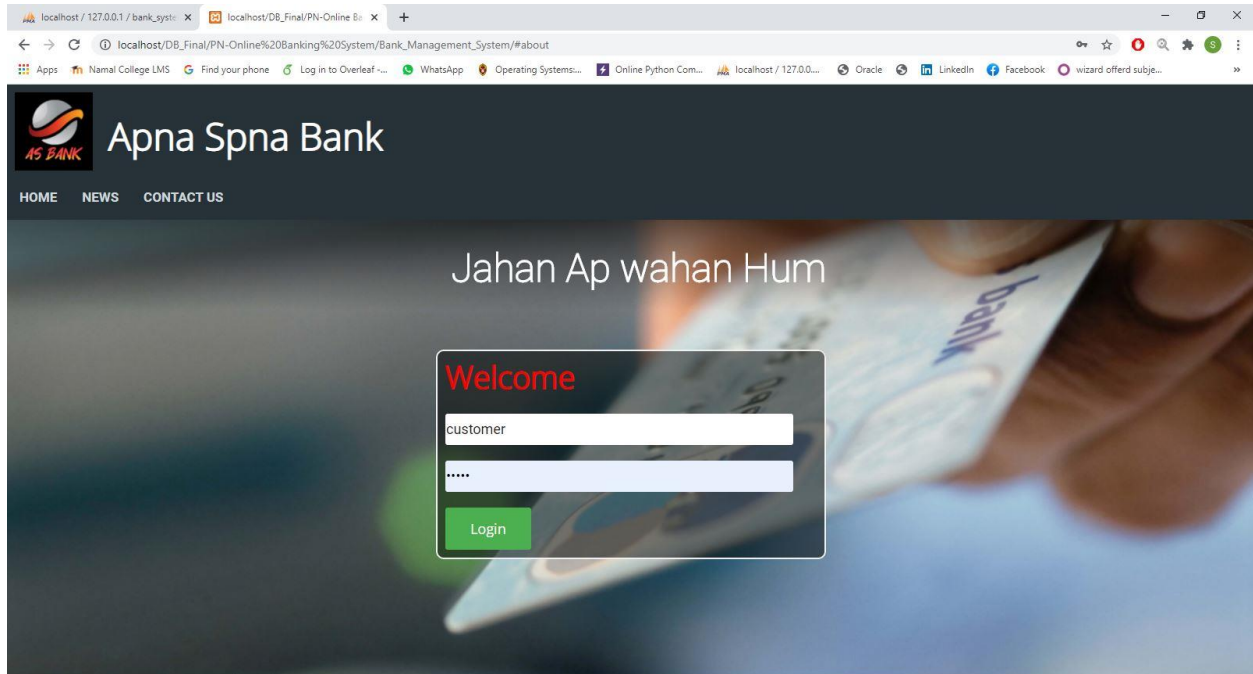

1. PHP language
2. HTML
3. CSS
4. Phpmyadmin
5. Xampp
6. MySQL

## Logo of Bank:

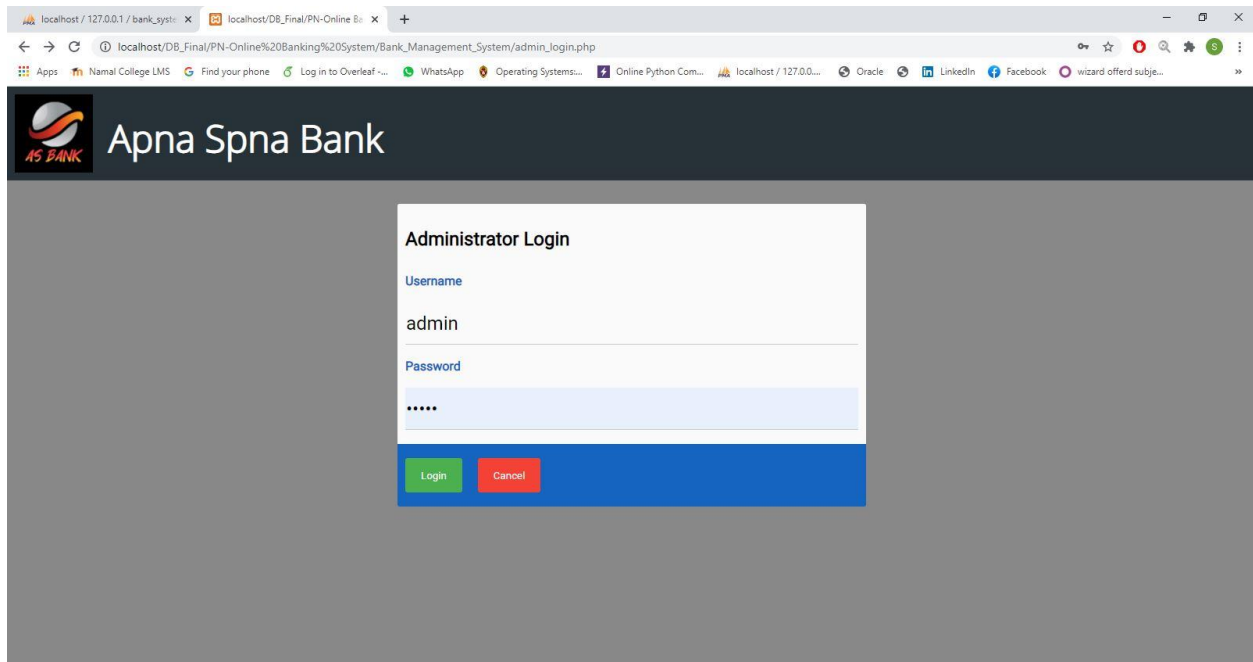

## Database:

I created the database named as “Bank\_System” and connected it with frontend website of bank. I made Administration and customer in the Bank. ATM facilities are also available.

Customer login interface is shown in above picture.  
And the Administration login interface is shown below:

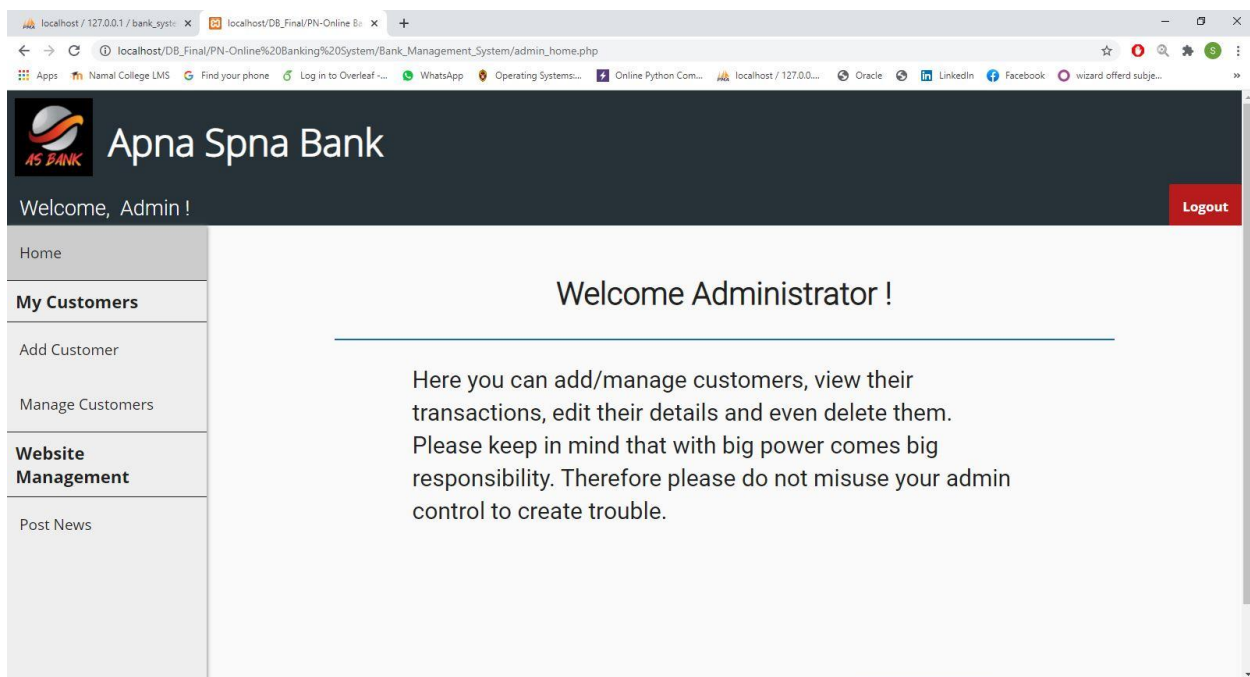

## Administration:

Administration can deal with all the customers in the bank. Administration can add , delete and change the customers.

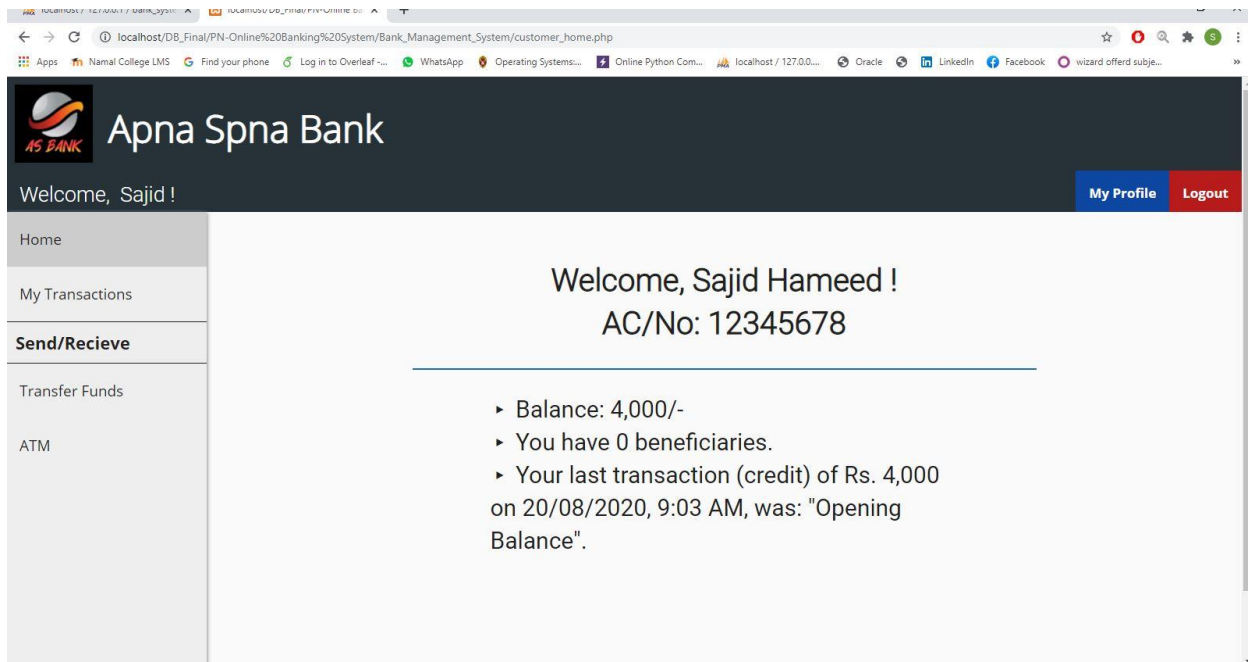

## Customer:

Customers are added by the administration. Customer can have beneficiaries. Customers can transfer funds to another customer in the bank. Customers can also avail the ATM facility.

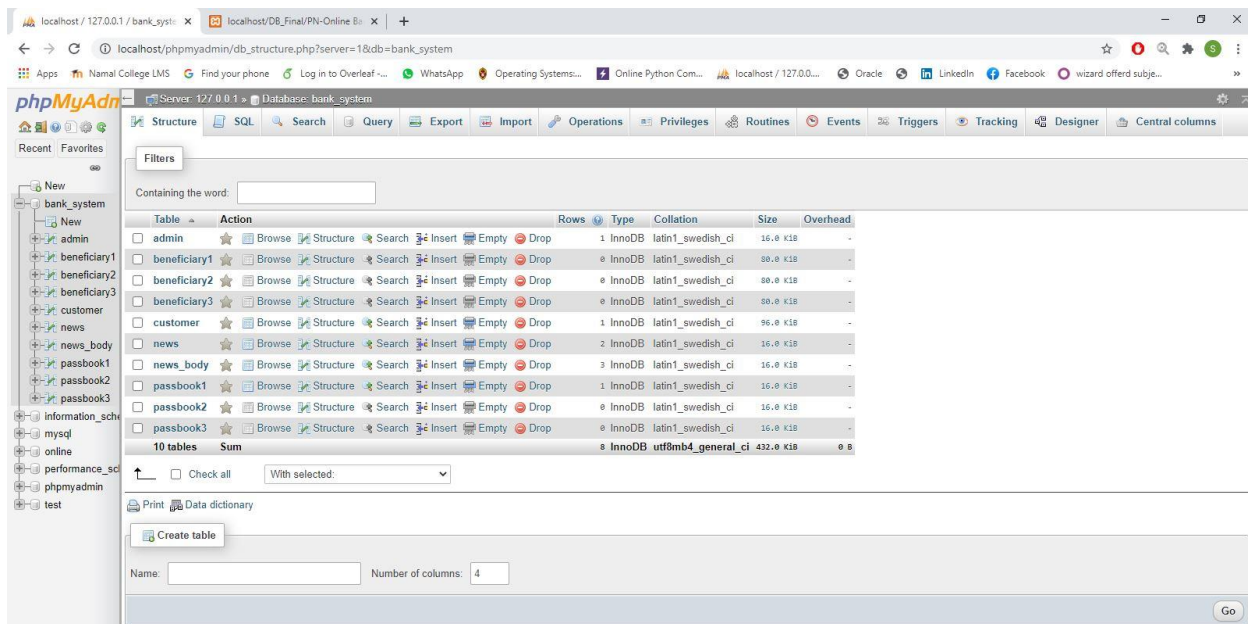

## Administration Home Page:

## Customer Home page:

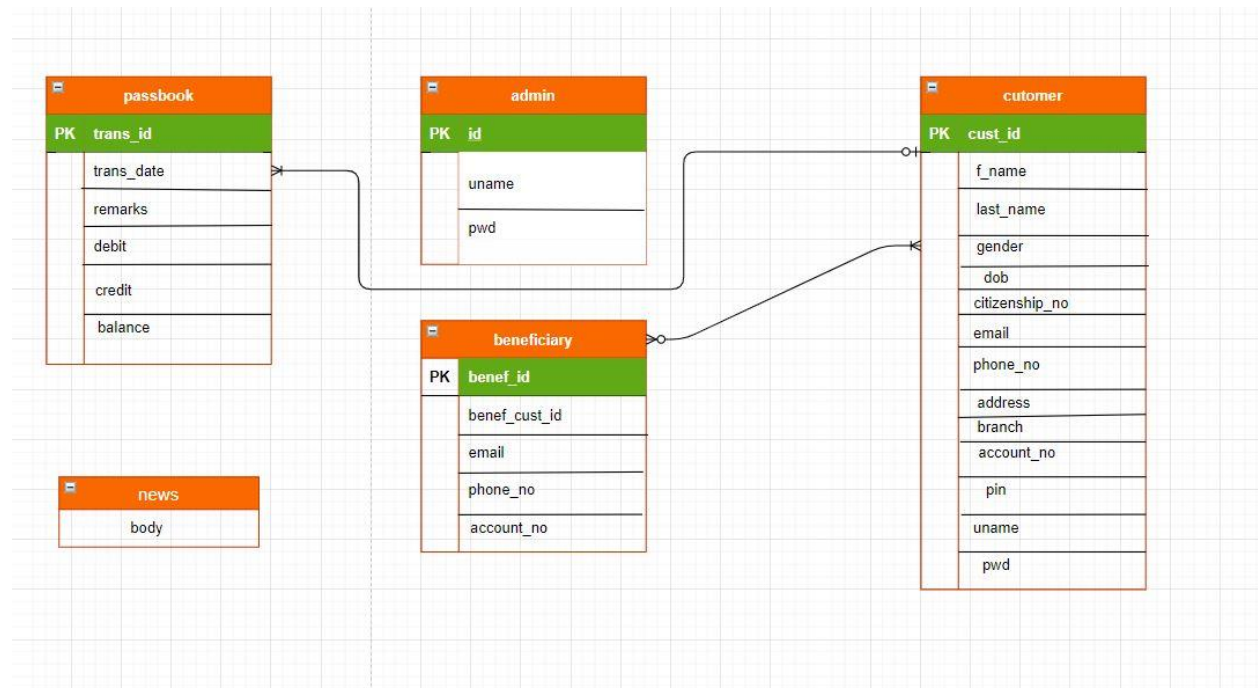

## Database (“Bank\_System”):

# Schema of Database:

Schema of our database s given below:

# ER Diagram:

ER diagram is shown below:
